

# Are you a late-diagnosed autistic woman who has spent years masking?

Masking: Hiding your autistic traits to appear neurotypical  
CAMOUFLAGING                      *Passing*                      Compensation  
**Social Adaptations**

**Share your Experience: Participate in a MULTI-PART Research Project on Masking**

## What?

We're exploring the experiences of **late-diagnosed autistic women** and how **masking** impacts their cognitive, emotional and physical self.

## What you will do:

1. **Interview:** A 60 – 90-minute interview (online or in person) about your experiences.
2. **Brain and Body:** Complete a computer task while I measure your brain activity. This part of the project will require you to be in our London Lab for approx. 2 hours.
3. **Online Questionnaires**

## You:

- Identify as a woman
- Between the ages of 21-70
- Clinical diagnosis of autism after the age of 18

## Why?

- £50 Amazon voucher
- Help shape our understanding of the autistic experience
